GAS LEAKAGE MONITERING AND ALERTING SYSTEM FOR INDUSTRIES

Student Name	G.C.Charaisse
Student Register Number	821219104006

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud.

Output and Simulation :

The screenshot displays the Wokwi web IDE interface. On the left, the sketch.ino file is open, showing a C++ program that initializes an ESP32, connects to an IBM Cloud IoT device, and uses an ultrasonic sensor to measure distance. The code includes comments and defines various variables for the device and sensor. The right side of the interface shows a simulation of the hardware, including an ESP32 board and an HC-SR04 ultrasonic sensor. Below the simulation, a console log shows the output of the program, including the distance measured (96.99 cm) and the alert message sent to the cloud.

```

Publish ok
Distance (cm): 96.99
ALERT!!
Sending payload: {"Distance":96.99,"ALERT!!":"Distance less than 100cms"}
Publish ok
Distance (cm): 96.99
ALERT!!

```

Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events.
